Education

University of Toronto

Sep 2021 – Present

BSc, Computer Science (Specialist), Statistics (Major)

Toronto, ON

- Relevant Courses: Formal Methods in Software Design, Operating Systems, Computational Linguistics, Natural Language Computing, Database System Technology, Introduction to Artificial Intelligence

Experience

Data Engineer

May 2024 – April 2025

Royal Bank of Canada

Toronto, ON

- **Change Data Capture (CDC)**: Designed and implemented a **Python (Pandas)** CDC pipeline to clean and transform large datasets, generate surrogate keys, and keep records in near-real-time sync across multiple sources. Separated new, updated, and closed units for downstream systems.
- **Transit Hierarchy Cleaning**: Re-engineered the transit hierarchy used for risk assessment by matching transits across legal entity, location, and financial metrics with **Python/Pandas**. Built a **React**-based validation app and backend services to manage hierarchy changes and improve data quality.
- **NLP for Incident Reports**: Built an end-to-end **NLP pipeline** in **spaCy** to convert free-text incident reports into structured fields. Labeled a historical dataset and trained a **supervised text-classification model** to auto-tag event type, business line, and root cause, improving searchability and reuse of past risk events.

Software Engineer

May 2023 – August 2023

Deutsche Telekom

Beijing, China

- **Office Automation Website Development**: Built an office automation web application on the **Cumanada** workflow engine, designing flowchart-based employee management workflows and department-specific UIs. Implemented the **Java** backend with full **CRUD** database operations and integrated workflow engine APIs for seamless data exchange and system reliability.

Projects

Scriptorium Code Template Manager

Jan 2025 – April 2025

Next.js, Node.js, TypeScript, JavaScript, Prisma, PostgreSQL

- Developed a web app in **Next.js** and **Node.js** that lets users create, execute, and share code templates in multiple languages.
- Implemented backend APIs using **Prisma** and **PostgreSQL** with role-based permissions and JWT authentication. Used **Docker** for containerized development.

University Community Application Development

Oct 2024 – Dec 2024

Java

- Developed a multifaceted Java Swing application for a university community with social, club, food, trading, and lost-and-found features, including a restaurant recommendation module that computes and displays average prices and ratings through an intuitive, user-focused interface.

Technical Skills

- **Languages**: Python, Java, C/C++, JavaScript/TypeScript, SQL
- **Frameworks**: React, Node.js, Express, Django/Flask
- **Tools**: Git, Docker, Linux, VS Code, IntelliJ
